Overview

McCain's Vandal Resistant Pull Box Insert is a simple and effective means to reduce and discourage copper theft; providing safety and security to pull boxes of all types and sizes. Copper theft is a rising problem across the country, increasing 500% since 2001. This is not only costly to taxpayers and timely to repair, it can also create dangerous conditions and pose a severe threat to the national infrastructure. The unauthorized removal of existing copper can cause serious issues, including but not limited to loss of traffic signals, street lighting, and communications resulting in accidents, traffic delays, and injuries. Protect your valuable assets and infrastructure with McCain's patented Vandal Resistant Pull Box Insert.

Benefits

- Protects essential infrastructure assets, promoting community safety
- Standard and custom sizes available
- Manufactured from hot dipped galvanized steel to prevent rusting
- Easily retrofits existing pull boxes
- Proven and tested third generation design

Product Description

The McCain Vandal Resistant Pull Box Insert provides security and safety against unauthorized persons attempting to enter pull boxes. Its patented design quickly retrofits existing or new pull box installations in a matter of minutes without tools.

The insert is manufactured from hot galvanized steel to prevent rusting and used in combination with an off-the-shelf padlock furnished by the user. To resist it from being easily cut and removed with bolt cutters, the lid partially covers the lock.

McCain's Vandal Resistant Pull Box Insert fits most standard pull boxes and specifications for traffic signals, street lighting, electrical and communication applications. Custom sizes are also available.
